

Stereo Vision and Virtual Reality

Multimedia Techniques & Applications
Yu-Ting Wu

1

Multimedia Techniques and Applications 2022

Outline

- Stereo vision
- Virtual reality

2

Multimedia Techniques and Applications 2022

Stereo Vision

3

Multimedia Techniques and Applications 2022

Why Human can Perceive 3D

- Physiological perception
- Psychology perception

Materials from <https://www.youtube.com/watch?v=ZKZfBYZ91e0>

4

Physiological Perception

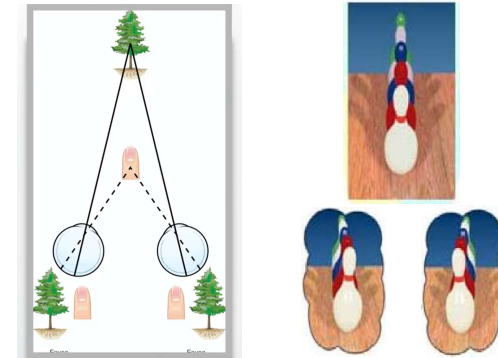

- Binocular display
- Convergence
- Motion parallax
- Accommodation

5

5

Binocular Display (Stereo)

- Left and right eyes see different aspects of the same objects

6

6

Convergence

- Independent control of eye's viewing direction

7

7

Motion Parallax

- Nearby objects appear to move faster across the view

8

8

Accommodation

- Variable focus control

9

9

Psychology Perception

- Linear perspective
- Occlusion
- Shading (and shadows)
- Texture
- Prior knowledge

10

10

Linear Perspective

- Parallel lines converge at a distant point on horizon

11

11

Occlusion

- Invisible portion of objects behind an opaque object

12

12

Shading (and Shadows)

- Shading and shadows cast by an object gives a strong depth cue

13

13

Texture

- Surface feature on objects can be used to infer 3D shape and distance

14

14

Prior Knowledge

- Common structure of objects can be used to infer depth cues

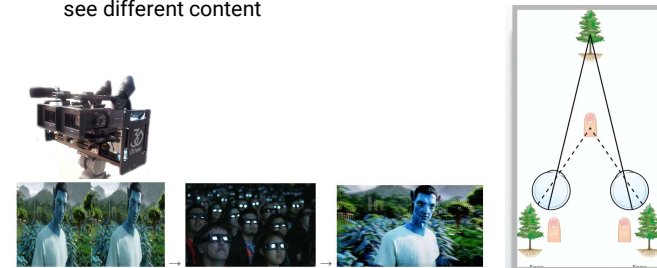

15

15

How a 3D Display Works

- How to enable people to perceive 3D from a 2D content (for example: screen) ?
- Usually based on **binocular display (stereo)**
 - Use special glasses (and projectors) to let left and right eyes see different content

16

16

Multimedia Techniques and Applications 2022

Types of 3D glasses

Anaglyph 3D glasses

Polarized 3D glasses

Active shutter 3D glasses

Virtual Reality

18

Multimedia Techniques and Applications 2022

Virtual Reality

- The Matrix (1999)
 - <https://www.youtube.com/watch?v=AGZiLMGdCE0>

19

Multimedia Techniques and Applications 2022

Virtual Reality (cont.)

- The Matrix (1999)
 - *'This isn't real?'*
 - *'How do we know what we experience is 'real'? What is 'real'? How do you define 'real'?'*
 - *'If you're talking about what you can feel, what you can smell, what you can taste and see then 'real' is simply electrical signals interpreted by the brain'.*

20

Virtual Reality (cont.)

- Use computer technology to synthesize and simulate a 3D world that a user can explore and interact with while feeling as if he/she was in that world

21

21

Virtual Reality (cont.)

- A generalized definition

VR with head-mounted display (HMD)

Immersive projection

Ambisonics

39

39

Assess VR Experiences

Based on "Defining Virtual Reality: Dimensions Determining Telepresence", Jonathan Steuer, Communication in the Age of Virtual Reality 1995

- **Vividness (Immersion)**
 - The representational richness of a virtual environment (the way info is presented to the senses)
- **Interactivity**
 - The extent which users can participate in modifying the form and content of a virtual environment in real time

40

40

Factor of Vividness

- **Breadth of information**
 - Number of sensory dimensions simultaneously presented by the virtual environment
- **Depth of information**
 - The quality of data a user receives when interacting in a virtual environment

41

41

Factor of Vividness (cont.)

- **Breadth of information**
 - Number of sensory dimensions simultaneously presented by the virtual environment

42

42

Factor of Vividness (cont.)

- **Depth of information**
 - The quality of data a user receives when interacting in a virtual environment

43

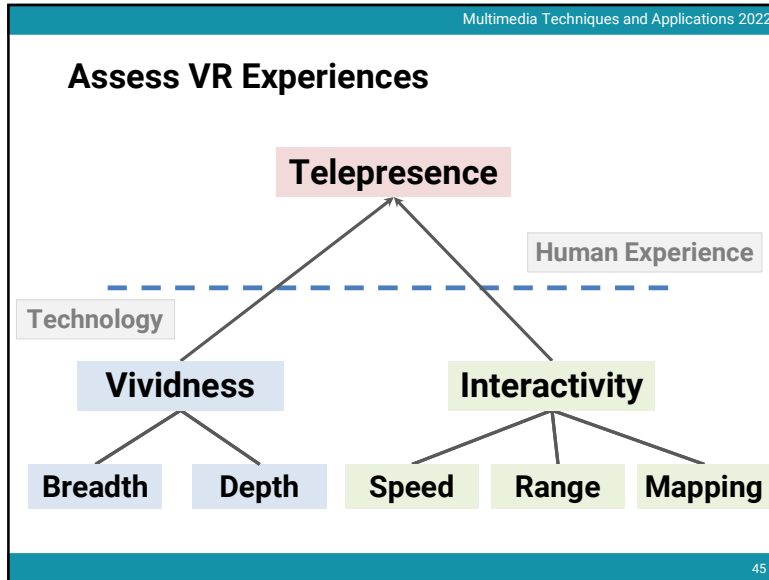

43

Factor of Interactivity

- **Speed**
 - The rate at which input can be assimilated into the mediated environment
- **Range**
 - The number of possibilities for actions at any given time
- **Mapping**
 - The abilities of a system to map its controls to changes in the mediated environment in a natural and predictable manner

44

44

45

Multimedia Techniques and Applications 2022

Basic Components of VR

- A VR technique should at least include
 - Three-dimensional object that appear to be life-sized from the perspective of user
 - **Stereoscopic simulation, rendering, and display**
 - The ability to track a user's motions, particularly the head movements
 - **Tracking system**

46

46

47

Multimedia Techniques and Applications 2022

Head-mounted Display

- Human eyes cannot see the very close-by objects (screen) clearly
- Need lenses for focusing

48

48

Head-mounted Display (cont.)

- How lenses for VR HMD work
 - <https://youtu.be/NCBEYaC876A>

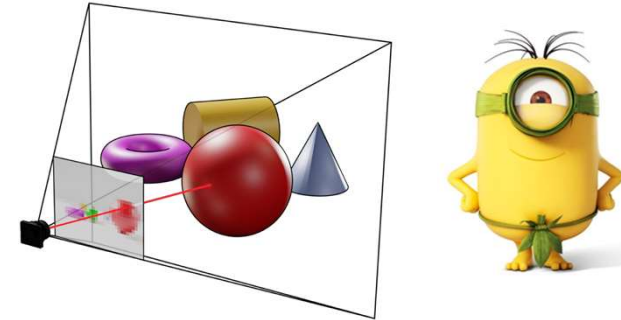

49

49

Stereo Simulation

- Based on binocular display

50

50

Stereo Simulation (cont.)

- Based on binocular display

56

56

Multimedia Techniques and Applications 2022

Tracking System (cont.)

- Two types of tracking systems

Cameras are fixed to the environment

Outside - In

A camera is attached to a user

Inside - Out

57

Multimedia Techniques and Applications 2022

Outside-In Tracking

Oculus Rift
Constellation

HTC Vive
Lighthouse

58

Multimedia Techniques and Applications 2022

Oculus Rift: Constellation

- LEDs on HMD emits lights
- Camera captures the lights and transmits the image data to PC
- PC analyzes the data and determines HMD pose (+IMU)

59

Multimedia Techniques and Applications 2022

HTC VIVE: Lighthouse

- Lighthouses emit lights and X-Y lasers
- Sensors on HMD receive light and laser, and transmit the timing data to PC
- PC determines HMD pose by the timing data of sensors

60

Multimedia Techniques and Applications 2022

HTC VIVE: Lighthouse (cont.)

- <https://youtu.be/J54dotTt7k0>

61

Multimedia Techniques and Applications 2022

Inside-Out Tracking

- Based on the technique, structure of motion (SLAM)

Oculus Quest (May, 2019)

Oculus Quest 2 (Oct. 2020)

HTC VIVE Focus Series

62

Multimedia Techniques and Applications 2022

Put It All Together

Tracking System

Real World

Position & Rotation Of HMD and Controllers

Stereoscopic Simulation & Rendering

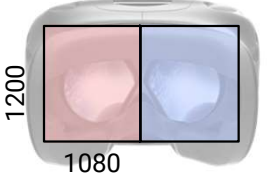

Virtual World

63

Multimedia Techniques and Applications 2022

Major Challenges

- Rendering cost
 - HMD has **high resolution** and **high refresh rate**
 - For example, for HTC VIVE, the resolution is 1080 x 1200 per-eye and 90 Hz

- We need to render larger frame buffer (1512 x 1680 per-eye) due to the lens distortion

64

Multimedia Techniques and Applications 2022

Major Challenges

- Rendering cost
 - We need to render larger frame buffer (1512 x 1680 per-eye) due to the lens distortion
 - GPU cannot natively render non-linear images

LCD display
Warped "fisheye"-like image required to match optics – enlarged in the center and compressed in the periphery

Optics
Transforms light from display to a wide field of view focused on the eye

User's view
User sees correctly proportioned (not fisheye) scene with wide field of view

65

65

Multimedia Techniques and Applications 2022

Major Challenges

- Rendering cost
 - We need to render larger frame buffer (1512 x 1680 per-eye) due to the lens distortion
 - GPU cannot natively render non-linear images
 - Current solution: render a larger image and warp it

Rendered Image

Warped Image

66

66

Multimedia Techniques and Applications 2022

Major Challenges

- Rendering cost
 - Rendered pixel per second

<p>PC GAMING = 60 MP/S (1920 X 1080 @ 30 FPS)</p> <p>1080 1920</p>	<p>VIRTUAL REALITY = 450 MP/S (3024 X 1680* @ 90 FPS)</p> <p>1680 1512 1512</p>
---	--

- The rendering cost for VR is about 7 times than PC in terms of pixel number

67

67

Multimedia Techniques and Applications 2022

Major Challenges

- Tethered v.s. standalone
 - Rendering quality v.s. flexibility

68

68

Multimedia Techniques and Applications 2022

Major Challenges

- Motion sickness

69

Multimedia Techniques and Applications 2022
